TÂN HỒNG PHONG

SUMMARY

Second-year student in Logistics Technology at UEH, with a career focus on logistics operations, systems analysis, and process optimization. Experienced in AI-related research and operating mobile monitoring robots, with strong interest in applying IoT and blockchain technologies in supply chains.

CONTACT

Address: 2225 Pham The Hien, Ho Chi Minh City, Vietnam

Phone: 03 9425 4331

SKILLS

Technical skills:

• Excel & Power BI basics
• Web devoloper
• Python, PostgresSQL, github, CPLEX, MATLAB.
• LLMs Agents (Openclaw)
• Machine Learning & Deep Learning.

Solf skills:

• Teamwork
• Reseach
• Project management
• Leadership
• Presentation

EDUCATION HISTORY

Bachelor of Engineering **2024 – Present**
University of Economics Ho Chi Minh City (UEH)
• Major in Logistics Technology. GPA: 3.87
• Career Focus: Logistics Operations, Systems Analysis, and Supply Chain Technology.

Standing Member OpenLAB **2024 - 2025**
OpenLab - 3I – UEH
Researched and operated Mobile Robot systems in real-world settings.

Engineering Exchange Program **02/2025 - 06/2025**
National United University - Miaoli, Taiwan

Academic Affairs Member - CTD, UEH **12/2025 - Now**
Researched and developed optimization models for logistics problems.
Supported learning activities for CTD.

Selected Achievements:
• Second Prize – UEH Young Researcher Award 2024–2025
• Second Prize – Robot Challenge 2025
• Second Prize – CTD Scholars Student Awards 2025.

PROJECTS

► Research on Bird's Nest House Monitoring Robot System
• Researched and designed a monitoring system for indoor bird's nest houses
• Developed a solution for environmental supervision in practical settings

► Autonomous Picking Robot with Computer Vision
• Designed an automated picking robot inspired by smart factory applications
• Integrated computer vision to support object detection and picking operations

► AI, IoT for Blockchain in Food Supply Chain Transparency
• Researched the application of AI, IoT for blockchain in clean food SC.
• Proposed a transparency verification approach to improve traceability and trust.
