

TÂN HỒNG PHONG

SUMMARY

Logistics Technology student at UEH with a career focus on Production Planning and Manufacturing Operations. Experienced in operations-related projects involving production planning, optimization, and applied technology. Interested in applying data analysis, structured problem-solving, and technology to support production planning and operational improvement in manufacturing environments.

CONTACT

Address: 2225 Pham The Hien, Ho Chi Minh City, Vietnam

Phone: 03 9425 4331

SKILLS

Data & Analytics

- Microsoft Excel
- Power BI

Optimization & Program

- Python
- IBM CPLEX

Operations & Planning

- MPS, MRP, PS.
- Process Analysis

AI & Applied Technology

- Computer Vision
- AI Applications
- IoT Systems

Soft Skills: Collaborative, organized, and problem-solving oriented.

EDUCATION HISTORY

Bachelor of Engineering

2024 – Present

University of Economics Ho Chi Minh City (UEH)

- Major in Logistics Technology. GPA: **3.89/4.00 (8.99/10)**
- Career Focus: Logistics Operations, Manufacturing Operations, and Supply Chain Technology.

Standing Member OpenLAB

2024 - 2025

OpenLab - 3I – UEH

Researched and operated Mobile Robot systems in real-world settings.

Engineering Exchange Program

National United University - Miaoli, Taiwan

02/2025 - 06/2025

Rajamangala University of Technology Lanna, Thailand

06/2026

Academic Affairs Member - CTD, UEH

12/2025 - Now

Supported learning activities for CTD.

Selected Achievements:

- Second Prize – UEH Young Researcher Award 2024–2025
- Second Prize – Robot Challenge 2025
- Award B – CTD Scholars Student Awards 2025
- Top 20 — SCMission 2026: The Vanguard.

PROJECTS

► Production Planning & Operations Optimization - SCMission 2026

- Developed production planning using capacity, MPS/MRP & scheduling logic.
- Analyzed disruptions and recovery options to reduce shortage and cost.

► AIoT-Based Operational Monitoring & Product Verification

- Developed an AIoT monitoring system using sensors, computer vision, and AI
- Improved product-condition visibility and operational traceability

► Autonomous Monitoring Robot & AI Inspection System

- Developed an autonomous robot for monitoring in difficult indoor environments
- Applied navigation, depth sensing, and AI-based inspection to reduce manual work
